Visitors Welcome

In our display beds we have well developed specimens of practically everything listed in this catalog as well as many hundreds of other perennial novelties. This year we are growing about 400 varieties of Tall Bearded Iris, including many new ones. The first week in June is the best time to see these. In the fall we will have about 300 varieties of the finest Chrysanthemums in flower. The public is cordially invited to visit these displays at any time. We are located just one mile from the center of Spokane's business district. To reach us, go north on Division Street to Boone Avenue (Burgan's Big Store). We are just one block north and one block east of there.

TYPE OF PLANTS—We do not ship worn out field grown plants. Our entire stock is re-set each season at very great expense, but it insures our customers healthy young plants that establish easily and grow vigorously. In most cases these are supplied with a small earth ball which helps to maintain life and vigor while in transit. Do not remove this earth ball. If dry, dip lightly in water and plant intact.

Our packing is done by expert packers and even with the slow transportation of these times our stock goes to every state in the union in excellent condition.

CHRYSANTHEMUM—Hardy Garden Sorts

See pages 12-14.

All plants listed in this section may be planted either spring or fall

HARDY GARDEN CHRYSANTHEMUMS

CHRYSANTHEMUM (Kris-an'-the-mum)

Chrysanthemums have no equal as cut flowers. The early sorts will give good blooms by the first of July and by a judicial choice of types you may have bloom until actual freezing weather. Many sorts are impervious to light frosts. Give plenty of moisture in full sun and fertilize heavily. Three or 4 inches of barnyard manure should be spaded into the soil before planting is done. A handful of bone meal may be put in the bottom of the hole when plant is set out. A monthly feeding of some good commercial fertilizer will give exhibition blooms. A liberal feeding of superphosphate in July and again in August will hasten the blooming period.

WINTER PROTECTION—The best winter protection is nature's own. In other words their own tops. Never cut the old plants down in the fall. If further protection is desired use excelsior or evergreen boughs. Never use leaves, straw or other material that will smother the young new growth.

NEW EARLY FLOWERING ENGLISH CHRYSANTHEMUMS

To those who aspire to grow large flowered Chrysanthemums, the English varieties are the answer. If disbudded and properly fed, this strain will produce flowers from 5" to 6" across or more. If not disbudded, they will still be larger than any other garden varieties. They also have the habit of early blooming which makes them doubly valuable. Without reservation, the English sorts are the elite of outdoor Chrysanthemums.

Bronze Giant—Although this is not of true English origination, the exceptional size of the flowers warrants listing in this group. The huge shaggy fully double blossoms of rich glowing bronze are carried on strong 30" stems. Extremely fine.

Display—Beautiful blooms of a very bright scarlet bronze with golden shading. Free flowering, strong stems and luxuriant foliage. This early bloomer is one of our favorites for cutting.

Gold Eagle—Immense thick shaggy blooms of lovely light creamy gold. Outer petals long and lacy. One of the finest of new English Chrysanthemums.

ENGLISH VIOLA

These Violas are far ahead of all other types yet introduced. In addition to having flowers as large as Pansies, they are even more profuse bloomers than the older types, producing masses of color from early spring until fall. Hardy, long-lived true perennial.
